

IPmotion™

Home of the CAR-A-WAN

Fully-fledged internet in every vehicle.

The CAR-A-WAN.automotive is a stable certified 3G/2G router built for vehicle installations. It is equipped with up to two data modules, which are capable of supporting up to 21 Mbits download and 5.76 Mbits upload.

WiFi hotspot.

The automotive router is equipped with a wireless LAN hotspot, enabling either hardwired or WIFI connectivity from any TCP enabled device e.g. laptop, cash terminal etc.

Always on, even at full speed.

Areas with poor reception or unsuccessful high-speed cell changes are a thing of the past. The second data module gives active failover, which enables a constant connection.

Multiplex your bandwidth.

The CAR-A-WAN distributes the user web applications across individual data modules (Plus Model).

Attach your own mobile phone.

The expandability of the CAR A WAN is innovative and unique. Mobile phones with integrated data modems and Bluetooth, e.g. Windows Mobile devices can be used to provide additional virtual bandwidth.

OS independent.

The CAR-A-WAN.automotive has a intuitive web interface, which offers a JAVA™ monitoring client for Windows™, Apple™ and Linux™. This client enables the monitoring of radio reception, remote administration and connectivity (even if roaming locks have been set).

Range of use:

Passenger cars & special-purpose vehicle

Commercial vehicle version by partners

Specification:

Dimensions (WxHxD): 112x30x175 mm
Input power: 6 Watts at 12V

Prices:

Inclusive Wireless LAN access point according to IEEE 802.11b/g (54 Mbit/s), 1* LAN, Bluetooth-PAN incl. loadbalancing, antennas and a mount. Prices plus VAT.

CAR-A-WAN.automotive..... € 1.049,-
1* HSUPA 7.2 Mbit/s (+EDGE/GPRS)

CAR-A-WAN.automotive Plus ... € 1.499,-
2* HSUPA 7.2 Mbit/s (+EDGE/GPRS)
