Great entertainment for your guests

Busworld 2015: IPmotion introduces Router & Streaming Media Server in one unit

Heuchelheim/Kortrijk, 21.1.2014 – By means of the Internet, the world is turning ever faster. Three quarters of people go online, twenty percent of which do so on their way. Smartphones, tablets and laptops make it possible. Thus travelling is nowadays to most people no longer a mere bridging of distances, but a question of luxury and diversion. While some make use of their journey time regarding labour, others like to be entertained. Whether checking their emails, listening to music or watching films – the needs of passengers vary. To satisfy them, the Central-Hessian router manufacturer IPmotion has developed an optimal solution. The mobile Wi-Fi router CAR-A-WAN.coach LTE with integrated media server makes travelling a whole new experience.

With the combined Internet-and-entertainment-package the device offers hereafter even more opportunities than just fast and secure Wi-Fi. "Therewith up to eighty passengers will be able to enjoy an unrestricted organization of an entertaining recreational time during travel", managing director Florian Kempff promises. The certified and future-proof 12V/24V-version of the CAR-A-WAN router has been continuously developed to a CAN2IP gateway based on FMS 2.0/3.0 with the collaboration of Continental AG. With the cooperation of Swiss high-class network infrastructure provider wlan-partner.com AG the router has been worked towards an appliance most suitable for the implementation in tour coach fleets. Moreover it serves as DLNA media server and is capable of streaming photos, music and videos to any suitable terminal device.

Passengers are thereby enabled to make use of the provided media center with the aid of their own mobile devices. "We offer our customers an umbrella license for the playback of their own media content as well as films provided on our part", Kempff explains. Because of the easily comprehensible system setup, end-users will have no difficulties to find their way within the media portal. No additional software is required. "Our service contains latest films and music releases as well as newspapers which can be called up with only a few clicks." Hence the times when coach trips mainly consisted of looking out of the window are gone.

End of press release, publication free of charge, specimen copy requested Images and other press material can be found at <http://www.ipmotion.de/en/news/press-releases/>

IPmotion GmbH

IPmotion GmbH, which was founded in Gießen in 1999 and has been based in Heuchelheim since 2009, is the world's first producer of high-availability mobile wireless routes and is today among the leading providers of innovative and reliable technology for the implementation of Internet connections in vehicles of all type: on land, at water and on international rail services.

CAR-A-WAN technology from IPmotion

Since 2003, CAR-A-WAN technology from IPmotion has been offering uncomplicated, fast and fail-safe access to company networks and the Internet from moving trains, private and commercial vehicles as well as buses and ships. Over ten years, the software has been further developed in line with customer requirements. CAR-A-WAN routers provide users with the multiple bandwidth of current mobile telephony connections and make possible the simultaneous use of several Internet or VPN connections from different network operators.
