

## PRESS RELEASE

### **IPmotion equips team bus of professional soccer players from FC Bayern Munich with CAR-A-WAN**

- CAR-A-WAN.coach Plus LTE for the players of the "Bestia Negra"
- Premium: Double LTE and WLAN
- New web interface in Responsive Design

**Munich, 22/11/2018** – This is already the third handover in Munich: After the first CAR-A-WAN to the national team in 2006, the bus to the handball team of Bavaria in 2012, the record champion today received his new team bus, a MAN with the mobile WLAN router of IPmotion GmbH, the Premium manufacturer of professional and automotive Internet access.

The bus, a Lion's Coach from MAN, was ceremoniously presented and handed over on Odenplatz in front of the Feldherrenhalle. The players have every convenience on board and can access the Internet barrier-free, whereby the CAR-A-WAN router simultaneously supplies the players with LTE Internet via WLAN between the mobile phone providers with full bandwidth of both modems.

With the CAR-A-WAN, special attention was paid to the fact that the drivers themselves can configure primary router settings on the Web with a smartphone without installing special apps:

With the admin web in Responsive Design, all operating parameters such as SIM card settings, WLAN name, WLAN password and roaming authorisation can be accessed securely and at any time with the smartphone and the connection technology, signal strength and location are displayed.

*Publication free of charge, specimen copy requested, Pictures and other press material can be found under [www.ipmotion.de/en/news/press-materials/](http://www.ipmotion.de/en/news/press-materials/)*

#### **The IPmotion GmbH**

Founded in 1999, IPmotion resides in the Hessian town of Heuchelheim since 2009. The company is the world's leading provider of high availability mobile routers. The deployment of fast and secure internet connections in all classes of vehicles (automotive, maritime and railway) is the company's main objective.

#### **IPmotion's CAR-A-WAN router technology**

The CAR-A-WAN router technology debuted in 2003 and has since been offering a stable and fast internet access point in commercial vehicles, trains, trams, buses and ships. Hardware and software have been continuously improved to fit customer needs and guarantee client satisfaction. The CAR-A-WAN router technology offers a multiple bandwidth in contrast to all

other system solutions and can be enhanced with the installing of further applications and services.
