

PRESS RELEASE

Reliable Internet access in emergency cases

IPmotion presents its new mobile WiFi router for emergency vehicles, fire brigades and mission control centres at the RETTmobil 2016

Heuchelheim, 01.05.2016 – With its new mobile router set CAR-A-WAN.112 LTE the German router manufacturer IPmotion is the first company to allow for a stable Internet connection in harshest operating conditions. The LTE device is especially apt to the usage in command vehicles of fire brigades, ambulance services and disaster control due to its extremely robust aluminium housing. It is moreover an ideal addition to those vehicles because of the new secure fax alternative which IPmotion presents at the RETTmobil 2016, a unique combination of a document scanner and an email attachment sending system which creates legally binding PDF documents and transfers them reliably which is most important where mission instructions are concerned.

In contrast to common fax technology this solution can be combined with digital signatures. Florian Kempff, IPmotion's CEO, explains: "Common fax technology only creates the appearance of a trustworthy sender whereas digitally signed PDF documents can be checked on the spot by the receiver with regard to their rightfulness." According to Kempff this aspect of reliability and certainty is the main advantage of the innovative technology. Furthermore, the mission instructions can be transferred much faster than with the ordinary fax technology. As Kempff himself is member of the voluntary fire brigade of his native village, he knows: "In action, each second can mean a life-or-death decision."

At the RETTmobil 2016 which takes place at the Messe Galerie Fulda from Wednesday, 11th to Friday, 13th of May 2016, IPmotion will present its novelty at its own stand with the number K1608. There the Hessian router manufacturer will also show its new router CAR-A-WAN.112 LTE and therewith the latest innovation for control centres and rescue vehicles.

Publication free of charge, specimen copy requested, Pictures and other press material can be found under www.ipmotion.de/en/news/press-materials/

The IPmotion GmbH

Founded in 1999, IPmotion resides in the Hessian town of Heuchelheim since 2009. The company is the world's leading provider of high availability mobile routers. The deployment of fast and secure internet connections in all classes of vehicles (automotive, maritime and railway) is the company's main objective.

IPmotion's CAR-A-WAN router technology

The CAR-A-WAN router technology debuted in 2003 and has since been offering a stable and fast internet access point in commercial vehicles, trains, trams, buses and ships. Hardware and software have been continuously improved to fit customer needs and guarantee client satisfaction. The CAR-A-WAN router technology offers a multiple bandwidth in contrast to all other system solutions and can be enhanced with the installing of further applications and services.
