

PRESS RELEASE

One year of being reliably online: berlinlinienbus.de chooses Wi-Fi by IPmotion

The long-distance coach company berlinlinienbus.de has been offering its customers for more than a year a stable broadband connection thanks to Wi-Fi-routers made in Germany.

Heuchelheim/Berlin, 14.11.2014 – A steady and reliable internet connection has become more important in the long-distance travelling market segment than ever. That has become clear to the companies of Bayern Express & P. Kühn Berlin GmbH and Haru Reisen OHG Hans Rudek. Both companies have combined their longstanding and successful commercial presence as well as their experience in charter transport in their joint venture berlinlinienbus.de which uses Wi-Fi-routers by IPmotion.

Since 2013 eighty-two CAR-A-WAN devices made by the Hessian company IPmotion have been built into berlinlinienbus.de's long-distance coaches. They provide more than 700.000 passengers a year with Wi-Fi during journeys.

Jörg Schaube of Bayern Express explains: „Wi-Fi is an essential equipment feature in the long-distance coach industry. Young passengers nowadays expect Wi-Fi on board. We deem it compulsory to offer our passengers stable and fast internet.“

Karsten Schulze of Haru Reisen adds: „It was most important to us that our on-board internet work as reliable and as fast as possible – even in an entirely booked up double deck coach. Our decision for IPmotion's routers still satisfies us today. The Wi-Fi we offer is widely esteemed and our customers' feedback is outright positive.“

Even on the surcharged route from Berlin to Hamburg that shows a meager network coverage berlinlinienbus.de is able to offer its customers the broadband connection they expect for one of IPmotion's IT experts checked this route as well as others of berlinlinienbus.de's with regard to the required router adjustments in advance.

IPmotion GmbH

IPmotion GmbH, which was founded in Gießen in 1999 and has been based in Heuchelheim since 2009, is the world's first producer of high-availability mobile wireless routes and is today among the leading providers of innovative and reliable technology for the implementation of Internet connections in vehicles of all type: on land, at water and on international rail services.

CAR-A-WAN technology from IPmotion

Since 2003, CAR-A-WAN technology from IPmotion has been offering uncomplicated, fast and fail-safe access to company networks and the Internet from moving trains, private and commercial vehicles as well as buses and ships. Over ten years, the software has been further developed in line with customer requirements. CAR-A-WAN routers provide users with the multiple bandwidth of current mobile telephony connections and make possible the simultaneous use of several Internet or VPN connections from different network operators.

Berlin Linien Bus GmbH

Berlin Linien Bus GmbH is a service provider for renowned autobus companies which offer their national and international public transport by the name of berlinlinienbus.de. They connect Berlin and other German cities with more than 250 destinations throughout Europe.
